

**Listing of Claims**

1.     **(Currently Amended)** A method comprising:  
maintaining real-time data for multi-channel communication queuing, wherein the  
maintaining comprises:  
forming a list of agent data, wherein the agent data includes information  
regarding a ~~relationship between~~ **corresponding status of an**  
agent ~~and a~~ **for each** type of communication media the agent ~~can~~  
**is authorized to** access.
2.     **(Original)** The method of claim 1, wherein the agent data further includes  
information related to the agent's skills.
3.     **(Original)** The method of claim 1, further comprising:  
maintaining a list of media routes.
4.     **(Previously Presented)** The method of claim 3, further comprising:  
compiling statistics for the media routes including at least one of: waiting time  
during a period, handling time during a period, number of abandon  
requests, longest waiting time, percentage of available agents, number of  
work items, and number of work items delivered to an agent.
5.     **(Currently Amended)** The method of claim 1, further comprising:  
compiling statistics for a communication channel of a specified media type  
including at least one of: start time, end time, average wait time, average  
time spent handling a work item, number of abandon requests, longest  
waiting time, percentage of available agents, number of work items,  
number of work items delivered to an agent, and number of unassigned  
work items.

6. **(Previously Presented)** The method of claim 1, further comprising:  
compiling statistics for the agent including at least one of: start time, end time,  
availability percent, busy percent, aux\_work percent, and number of work  
items served.
7. **(Previously Presented)** The method of claim 1, further comprising:  
compiling a journal for a work item including at least one of: the route for the  
work item, escalation history of the work item, start time, end time, and  
journal state history.
8. **(Original)** The method of claim 3, further comprising:  
assigning a priority value to the media routes.
9. **(Original)** The method of claim 3, further comprising:  
setting a maximum number of queued items for the media routes.
10. **(Original)** The method of claim 3, further comprising:  
setting a time for escalating a work item.
11. **(Original)** A computer readable storage media comprising:  
computer instructions to implement the method of claim 1.
12. **(Original)** A signal in a carrier medium comprising:  
computer instructions to implement the method of claim 1.
13. **(Currently Amended)** An apparatus comprising:  
means for maintaining real-time data for multi-channel communication queuing,  
wherein the means for maintaining comprises:  
means for forming a list of agent data, wherein the agent data includes  
information regarding a ~~relationship between~~ corresponding  
status of an agent ~~and a~~ for each type of communication media  
the agent ~~can~~ is authorized to access.

14. **(Original)** The apparatus of claim 13, wherein the agent data further includes information related to the agent's skills.
15. **(Original)** The apparatus of claim 13, further comprising:  
means for maintaining a list of media routes.
16. **(Previously Presented)** The apparatus of claim 15, further comprising:  
means for compiling statistics for the media routes including at least one of:  
waiting time during a period, handling time during a period, number of abandon requests, longest waiting time, percentage of available agents, number of work items, and number of work items delivered to an agent.
17. **(Currently Amended)** The apparatus of claim 13, further comprising:  
means for compiling statistics for a communication channel of a specified media type including at least one of: start time, end time, average wait time, average time spent handling a work item, number of abandon requests, longest waiting time, percentage of available agents, number of work items, number of work items delivered to an agent, and number of unassigned work items.
18. **(Previously Presented)** The apparatus of claim 13, further comprising:  
means for compiling statistics for the agent including at least one of: start time, end time, availability percent, busy percent, aux\_work percent, number of work items served.
19. **(Previously Presented)** The apparatus of claim 13, further comprising:  
means for compiling a journal for a work item including at least one of: the route for the work item, escalation history of the work item, start time, end time, and journal state history.
20. **(Original)** The apparatus of claim 15, further comprising:  
means for assigning a priority value to the media routes.

21. **(Original)** The apparatus of claim 15, further comprising:  
means for setting a maximum number of queued items for the media routes.
22. **(Original)** The apparatus of claim 15, further comprising:  
means for setting a time for escalating a work item.
23. **(Currently Amended)** A database structure comprising:  
a set of real-time data for a multi-channel communication queuing system; and  
a list of agent data, wherein the agent data includes information regarding a  
**relationship between corresponding status of an agent and a for each**  
type of communication media the agent ~~can~~ **is authorized to** access.
24. **(Original)** The database structure of claim 23, wherein the agent data  
further includes information related to the agent's skills.
25. **(Original)** The database structure of claim 23, further comprising:  
a list of media routes.
26. **(Previously Presented)** The database structure of claim 25, further  
comprising:  
a statistics table for the media routes including at least one of: waiting time during  
a period, handling time during a period, number of abandon requests,  
longest waiting time, percentage of available agents, number of work  
items, and number of work items delivered to an agent.
27. **(Currently Amended)** The database structure of claim 23, further  
comprising:  
a statistics table for a communication channel of a specified media type including  
at least one of: start time, end time, average wait time, average time spent  
handling a work item, number of abandon requests, longest waiting time,  
percentage of available agents, number of work items, number of work  
items delivered to an agent, and number of unassigned work items.

28. **(Previously Presented)** The database structure of claim 23, further comprising:

a statistics table for the agent including at least one of: start time, end time, availability percent, busy percent, aux\_work percent, and number of work items served.

29. **(Previously Presented)** The database structure of claim 23, further comprising:

a journal table for a work item including at least one of: the route for the work item, escalation history of the work item, start time, end time, and journal state history.

30. **(Original)** The database structure of claim 25, further comprising: priority values for the media routes.

31. **(Original)** The database structure of claim 25, further comprising: a maximum number of queued items for the media routes.

32. **(Original)** The database structure of claim 25, further comprising: a time for escalating a work item.

33. **(Currently Amended)** The method of claim 1, wherein the **relationship corresponding status** is one of a plurality of **relationships corresponding statuses** for the agent, wherein each **relationship corresponding status of the plurality of corresponding statuses** corresponds to a different type of communication media.

34. **(Currently Amended)** The method of claim 33, wherein the agent data further includes a ~~corresponding status of~~ **an amount of time** the agent **has worked on an active work item using** ~~with respect to each communication media with which the that the agent has a relationship.~~

35. (Currently Amended) The method of claim 33 ~~[[34]]~~, wherein each corresponding status of the agent is maintained in real-time.

36. (Currently Amended) The apparatus of claim 13, wherein the ~~relationship~~ corresponding status is one of a plurality of ~~relationships~~ corresponding statuses for the agent, wherein each ~~relationship~~ corresponding status of the plurality of corresponding statuses corresponds to a different type of communication media.

37. (Currently Amended) The apparatus of claim 36, wherein the agent data further includes ~~a corresponding status of~~ an amount of time the agent ~~with respect to~~ has worked on an active work item for each communication media ~~with which the agent has a relationship~~.

38. (Currently Amended) The apparatus of claim 36 ~~[[37]]~~, wherein each corresponding status of the agent is maintained in real-time.

39. (Currently Amended) The database structure of claim 23, wherein the ~~relationship~~ corresponding status is one of a plurality of ~~relationships~~ corresponding statuses for the agent, wherein each ~~relationship~~ corresponding status of the plurality of corresponding statuses corresponds to a different type of communication media.

40. (Currently Amended) The database structure of claim 39, wherein the agent data further includes ~~a corresponding status of~~ an amount of time that the agent ~~with respect to~~ has worked on an active work item for each communication media ~~with which the agent has a relationship~~.

41. (Currently Amended) The database structure of claim 39 ~~[[40]]~~, wherein each corresponding status of the agent is maintained in real-time.
